

PROFESSIONAL EXPERIENCE

Laminar Group, Atlanta, GA
Senior Manager of Product

Dec 2023 - Present

- Own product vision and roadmap for a portfolio of enterprise AI/ML products on a mission-critical SaaS platform serving 2,000+ customers and \$10B+ in annual business volume - leading a cross-functional team of data scientists, ML engineers, and developers across the full AI product lifecycle, from problem framing and model evaluation through production deployment and measurable impact.
Tools: Python, SHAP, Vertex AI, BigQuery, Jira, Figma, Confluence
- Drove \$7M in incremental ARR and a 6-pt lift in net revenue retention by owning AI product strategy end-to-end and product roadmap, translating model capability into monetizable enterprise value and aligning Engineering, GTM, and executive leadership.
Tools: SQL, Looker, BigQuery, Amplitude, Productboard
- Led the 0→1 launch of a suite of production predictive models - schedule-delay risk, cost/revenue-overrun forecasting, and safety-incident prediction - defining the success metrics and evaluation metrics to drive customer decisions, cutting project overruns by 22%.
Tools: Python (scikit-learn, XGBoost), SHAP, BigQuery
- Shipped enterprise generative-AI products - LLM copilots, RAG-based document intelligence over specs, RFIs, and submittals, and multi-step agentic workflows (planning, tool calls, retries) owning the evaluation harness, retrieval-quality benchmarks, and hallucination guardrails that kept outputs production-grade while balancing accuracy, latency, and inference cost; cut document-search and reporting time 45% and lifted engagement 25%.
Tools: LangChain, LangGraph, LlamaIndex, Vector DB, RAGAS / DeepEval, Model Armor / Vertex AI safety filters (guardrails)
- Built the experimentation and evaluation platform for A/B testing, causal inference, and model evaluation with production monitoring- into the decision engine, running 50+ experiments that shaped product strategy and redirected \$4M of roadmap investment.
Tools: Python (SciPy, Statsmodels), Statsig / Optimizely, Vertex AI

TRINKERR, Bangalore, India
Product Manager

Apr 2021 - Dec 2023

- Shipped real-time product-health monitoring across a 5M-user platform, built dashboards and an anomaly detection framework spanning engagement, retention, and feed quality, cutting time-to-detect critical issues from days to hours and protecting the core user experience at scale.
Tools: Python, Tableau, Airflow, MLflow
- Led 0→1 development of the personalized feed's recommendation and ranking engine, partnering with ML engineers to ship a model (90% accuracy, $F1 = 0.85$) that became the primary driver of content discovery, eliminating manual curation and lifting feed engagement across the platform.
Tools: Python (scikit-learn, NLTK, transformer embeddings), R
- Built the company's experimentation program from zero to a core product capability, A/B testing and Sequential/Bayesian testing across feed ranking, discovery, onboarding, and notifications, increasing testing velocity and driving a 15% lift in engagement (time spent, CTR, screen-to-action).
Tools: Python (SciPy, Statsmodels), SQL
- Launched a personalized notification feature that predicts each user's peak activity window and delivers trade ideas and market alerts, lifting open rates by 25% and increasing visitor engagement by 9%. *Tools: Python, AWS (SageMaker, Redshift, S3)*
- Drove an 8% increase in D7/D30 retention by analyzing the activation drivers that predicted long-term engagement (first follow, first trade idea, watchlist setup) and using those insights to redesign the onboarding and activation roadmap. *Tools: Python, SQL, Tableau*

INVESIKA TRADING, Bangalore, India
Senior Analyst - Product

Jun 2016 - Mar 2021

- Analyzed trading data and market signals to identify opportunities for new pricing and signal-based products, delivering insights that shaped a pipeline of 8 new signals the desk built. *Tools: Python (Pandas, NumPy), SQL, Git, Airflow*
- Evaluated and validated predictive models (time-series analysis, regularized regression, gradient boosting) against business requirements, helping improve forecast accuracy 18% over the prior baseline. *Tools: Python (scikit-learn), Statsmodels, XGBoost, LightGBM*
- Designed and ran experiments and statistical hypothesis tests to separate high-value trading signals from noise, raising strategy hit rate from 52% to 58% (a 6-point gain) and ensuring only validated signals advanced to production. *Tools: Python (SciPy, Pandas), SQL*
- Acted as the analytical bridge between traders, quant developers, and portfolio managers - gathering requirements, calibrating risk limits, and translating complex PnL and quantitative findings into clear, actionable recommendations for both technical and trading audiences. *Tools: Tableau, Power BI*
- Built return, risk, and transaction-cost analyses that informed product decisions on position sizing and execution, contributing to a 12 bps per-trade reduction in realized slippage. *Tools: Python (SciPy)*

EDUCATION

FOSTER SCHOOL OF BUSINESS, UNIVERSITY OF WASHINGTON, Seattle, WA
Master of Science in Business Analytics

Jun 2026- Present

INDIAN SCHOOL OF BUSINESS, Hyderabad, India
Professional Degree in Product Management

July 2022 – June 2023

UNIVERSITY OF DELHI, New Delhi, India
Bachelor of Science in Economics

Jun 2013- Jun 2016
